- ✓ Silicone sealed for extra strength.
- ✓ Save up to 70% on your energy bills.
- ✓ Reduce outside noise by up to 80%.
- ✓ Life time structural guarantee!#

## WINDOWS

### FIXED

Fixed windows are more energy efficient than opening windows because they have fewer aluminium components, in addition they provide greater opportunity for views which are not cluttered with transoms and mullions.

A fixed window is used where the window is not accessible so is not required to open, as in a highlight, or where there is alternative ventilation.

### CASEMENT

Viewed as the epitome of styles in windows the EcoTech casement window is crafted in the classic sculptured look. So if you want a full height glass panel, without a transom (horizontal divider) this is the window for you.

- All casement windows come standard with locks.
- All casement windows accept flyscreens.

### AWNING

Practical, affordable and the most popular window in our range. Being top hung, the awning window can be left open in the rain without letting water in. It is fitted with a strong full box transom which is deep enough to hold the lockable chain winder, and combined with the silicon glazing which bonds the glass to the frame, this takes it to a performance level of N4 which is able to withstand 300kph wind. Also available in a privacy range with the bottom section double glazed in obscure glass.

- All awning windows come standard with locks.
- All awning windows accept flyscreens.

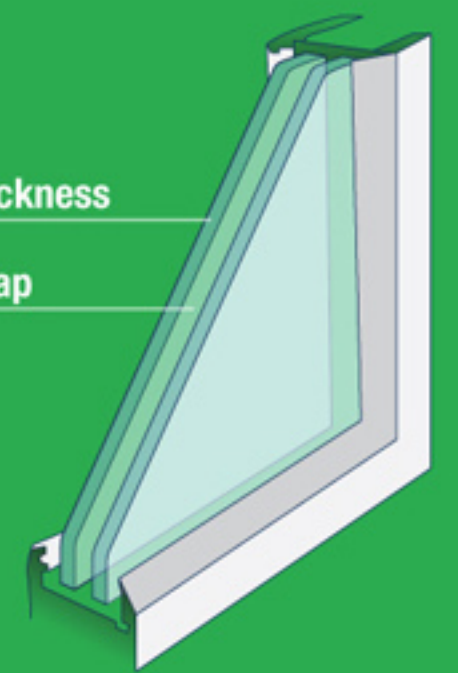

### BIFOLD

By turning your indoor kitchen into an outdoor servery, the EcoTech double glazed bifold window provides a direct connection to alfresco areas both enhancing ventilation, and making for easy communication between you the host/hostess and your guests.

When your bifold window is not open it looks great and keeps working by keeping out the cold weather.

4mm thickness

12mm gap

## EcoTech Aluminium Windows

EcoTech aluminium windows are ranked number 1 for energy performance in Australia for an aluminium window which is not thermally broken.

We use the best powdercoat in the world, Akzo Nobel. Your windows should be maintained using whatever you would use to wash your car.

All our windows come standard with double glazing. The typical awning window has 4mm thick glass and a 12mm air gap.

## DOORS

### ENTRY & FRAMES

The EcoTech aluminium entry is fully coordinated to your windows, and being maintenance free it will keep out wind and rain for many years. The self draining sill is anodised to withstand wear and tear but it also clips in for easy replacement should it get damaged.

The door opening is complete with perimeter seals and the side light option is fully double glazed. But best of all you can choose a fully double glazed entry door option.

- Brushed stainless hardware & lock.

### STACKER & SLIDING

Stacker and sliding doors combine the wide open air experience of the bifold door with the opportunity to have a sliding security or insect screen fitted to the inbuilt track, to give you an economical and practical solution to alfresco living.

The EcoTech stacker door comes in heights up to 3 metres and widths up to 6 metres (6 panels). The EcoTech sliding door comes in heights up to 3 metres and widths up to 6 metres (4 panels).

- Bi-parting sliding doors also available.
- All sliding doors accept flyscreens.

### FRENCH

A French door adds class to any home, open or closed it looks great, the wider panel components give the French door a presence that a sliding door can never achieve.

The EcoEco French door is very special, the silicone glazing bonds the glass to the frame, sealing it for life, and the three point locking system, which is fitted as standard, secures the panel in the closed position, firmly compressing the seals and adding to your security.

### BIFOLD

Nothing adds a statement in style like a bifold door. The EcoTech bifold door is very special from its standard 3 point secure locking system and double glazing through to the optional French door style opening. The silicon glazing bonds the glass to the frame so that your door will never drop but continue to give year after year of service, bringing the outside into your home, while keeping your family safe and warm. And our top standard height limit of 3 metres reflects the standard of design and engineering that goes into all of our products.

All doors: • Toughened glass included as standard. • All doors come standard with a deadlock.

### COLOURS

Choose from these great colours for both windows or doors.
