

Jumbocorp is a Waste Management Services Company that supply's Jumbobags, the disposable skips, to leading builders, small and large as well as developers.

Our cage liner is a 5.3 cubic metre polypropylene bag (100% recyclable bag) that fits inside a cage on site. The cage liner is unique in that it has a total weight capacity of approx. 10t (SWL 1.55 t multi trip bag). We mostly place them inside the property but where there is no room we can place them on the nature strip like the builder's bins. Jumbocorp are geared toward providing a 'site service' to residential builders whilst recycling the highest percentage of waste.

Cage Liner System

The cage liner is a 5.3 cubic metre polypropylene bag which is approx. 1.79 x 1.79 x 1.65

The cage liner is unique in that it has a total weight capacity of approx. 10t (SWL 1.55 t multi trip bag) and is 100% fully recyclable.

Benefits:

- Material segregated post collection and recycled where possible
- Cage and liner close to site reduces time in taking material to skip location which is generally on nature strip
- Reduced illegal dumping costs
- Less collection call ups due to larger vessel
- Ability (flexibility) to place on nature strip if required
- Jumbocorp do quick tidy up of excess light waste upon changeover.
- When able to place inside the property, builders have seen a reduction in illegal dumping
- Because there is a contained vessel (bag) in the cage, sites tend to be tidier
- Cages are delivered to site within 2 working days – cages are installed with liner inside
- Cage Swaps are actioned within 2 working days of call up (often next day) – they are collected by crane truck or truck mounted fork for inner city/powerline obstruction jobs.
- The liners are collected and taken to transfer stations to be sorted to ensure we have the highest percentage of builders waste recycled.

Volume/Cage Liner Empties Pricing

Single Storey Home:

4 lifts equating to 21.2m3 of material:

4 lifts @ \$1,200 *excl GST
